DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 87-97 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 66 of U.S. Patent No.

6,655,943. Although the conflicting claims are not identical, they are not patentably distinct from each other. Claim 1 of the instant application and claim 66 of '943 disclose a compression conveyor auger assembly comprising: a housing including an inlet and outlet end; an opening on the housing; and a compression conveyor screw rotatably disposed within the housing including a helical blade extending toward the outlet end, where the blade includes a plurality of flights. Both claims also disclose weld buildups on both sides of the helical blade. Claim 1 further discloses that each flight is divided into a plurality of stations. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a plurality of stations in each flight, to improve the function of the compression conveyor auger assembly.

Allowable Subject Matter

Claims 87-97 contain allowable subject matter. The following is a statement of reasons for the indication of allowable subject matter.

Hamilton (WO 94/07688) discloses a compression conveyer screw assembly for transporting and compressing various types of waste material, such as discarded packaging material, or corrugated cardboard. See page 1, lines 5-30. The assembly includes: (1) housing with an inlet end and tapered outlet end; (2) an opening adjacent

to the end of the housing; and (3) a compression conveyer screw rotatably disposing with the housing, where the screw is composed of a helical blade with a plurality of flights. See Fig.1; pages 20-24. Tamura et al. (US 5004352) discloses a weld buildup (21) on a pusher side. See Fig. 1a. However, no prior art of reference discloses a helical blade comprising weld buildups on a pusher side and a rear side and where each flight is divided into a plurality of stations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
